Willow				Low-volume basal treatment using Remedy in diesel oil for control		2 qts Grazon – Suppression Only		Low-volume basal treatment using Remedy in diesel oil				

BASAL BARK sprays of 25% Remedy and 75% Diesel may be performed year 'round.

### Mixed Brush Management

For pastures with a general mix of brushy species under 10 ft tall, utilize a tank mixture of 1 pt of Remedy + 1 qt of Grazon P+D. For stands that are taller than 10 ft., utilize a tank mixture of 1 qt of Remedy + 2 qts of Grazon P+D. Always use a drift control agent. When treating brush keep in mind that certain species such as dogwood, oaks, elms, skunkbrush, persimmon and ash trees will all need some follow-up treatment in 1-2 years. You also may use a spot spray rate of 1% Grazon, 1/2 % Remedy and surfactant to treat fence rows and touch up treated areas. For extremely overrun pastures consult your local Dow AgroSciences Range and Pasture representative for recommendations.
